

Forcura's Innovations Are Designed With Your Goals In Mind

As you search for the right technology partner to support your post-acute care business' operational and financial targets, consider the following capabilities offered by the Forcura solution that will help you hit your goals.

1. Referral Automation with IQ

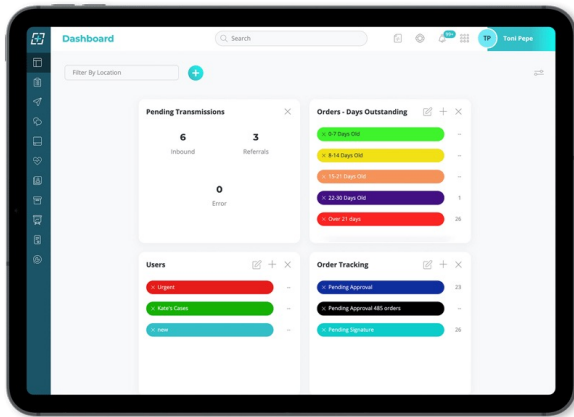

Never miss the chance to accept a new patient. Our platform digitizes and centralizes all your inbound documentation into a single dashboard, then automatically detects and diverts referrals into a dedicated work queue. From there, our AI-powered technology reads the patient demographic data and compares it to your existing patients, providing matches for your team to select with a click. Clients have saved up to two hours of referrals processing time with IQ, and one client saw patient onboarding time cut in half.

2. Mobile Care Coordination app

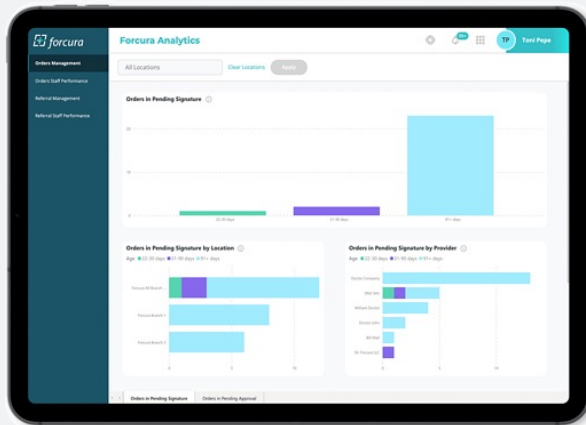

Attach point-of-care documentation almost instantly to the patient chart from your administrators or remote care teams with a click. Forcura's Care Coordination app uses HIPAA-secure communication technology so your remote staff can easily complete forms, capture documents, and obtain physician or patient signatures without having to return to the office. Forcura's app makes timely filing of your required documentation a reality.

3. Medical Records Management

Maximize your cash flows with tools that can empower your team to get physician orders signed in seven days or less. Need to act on outstanding orders older than your business's target sent-to-signed date? Coordinate your staff's outreach with Forcura's Provider Dashboard with Follow-up Tracking, which enables them to conduct bulk actions such as auto-fax resends and prioritizes their efforts regarding physician outliers who hold the most or oldest volumes.

4. Forcura Analytics

Instantly identify and solve bottlenecks or training gaps with eight easy-to-access reports that will help you keep your business on track. Monitor staff performance in real-time at the individual or location level. Evaluate your referral trends and anticipate how you'll need to allocate clinical staff. Reduce accounts receivables with reports that let you drill down to those physicians who hold the highest or oldest order volumes. You already work hard. With Forcura Analytics you'll work smarter.

5. Forcura Circle

You want your clinical documents reviewed, signed and returned fast. Our e-signature product is different, with a secure but simple login and intuitive experience for your signing physicians. Circle gives you a win-win where your providers can bulk sign up to 50 plans of care in a click - and you can get orders signed up to 50% faster.

6. Healthcare-designed Software

Work confidently with a platform created to link with your existing technology and provide optimal ease of use for medical professionals. Our enhanced security measures exceed HIPAA standards and our seamless integration ensures superior performance with rare system downtimes.

Improve your physician relationships, realize operational savings, and bring cash forward, all at cloud-based speed. Fewer clicks, better care. That's the Forcura solution.
